

## GRAY CYBER SECURITY

CYBER SECURITY MADE SIMPLE

***Our Cyber Protection & Training Package offers a comprehensive security bundle with training all for \$59 per user/month. Protect your business and empower your employees while lowering your cyber-insurance premiums. What's included:***

### **Annual Cyber Security Awareness Training**

Empower your employees to recognize common cyber threats and understand vulnerabilities and threats to business operations. Help your employees be part of your organization's computer security. Includes live training and presentation material for future review. Covers topics including: Culture, Security Awareness Basics, Malware/Ransomware, Phishing/Email, Social Engineering, Password Safety & 2FA. Public Wi-Fi/ Internet of Things, Security Updates, Workstation Security, Laptop Security.

### **Phish Threat**

Phishing attack simulation and training for your end users. Phishing is big business. Attacks have shown record growth in recent years, and a solid security awareness program is an integral part of any defense-in-depth strategy. Phish Threat educates and tests your end users through automated attack simulations, quality security awareness training, and actionable reporting metrics.

### **SafeGuard Encryption**

SafeGuard encrypts off campus laptops as well as content as soon as it's created. And with the encryption always on, you can enjoy seamless secure collaboration. Synchronized Encryption proactively protects your data by continuously validating the user, application, and security integrity of a device before allowing access to encrypted data.

### **Predictive Email Security**

**See the Future** - Email sandboxing is a deep learning neural network, able to block zero-day malware and unwanted applications.

**Stop Ransomware** - The most advanced anti-ransomware technology available. Email security uses behavioral analysis to stop never-before-seen ransomware and boot-record attacks.

**Block Stealth Attacks** - Time-of-click URL protection checks the website reputation of email links before delivery and again when you click – blocking stealthy, delayed attacks that other email security can miss.

### **Endpoint Cyber Threat Monitoring (SIEM)**

By applying cutting-edge SIEM (Security Information and Event Management) technology and established threat intelligence, suspicious activity and security incidents on your network can be identified and re-mediated as they occur.

### **Support For Cyber Security Insurance Application**

Gray Cyber will help you through the application process answering any questions throughout the process.

### **Managed 24/7/365 By Experts In Cyber Security**

Gray Cyber manages all aspects of implementation and maintenance. The cyber security landscape is ever changing, let Gray Cyber keep you covered.
